Glucagon

Used for severe low blood sugars if unable to eat/drink (such as when having a seizure or unconscious)

- Each of these is one time use only
- Can repeat with another dose after 15 minutes

Type of glucagon	How to use		
 **Baqsimi (nasal glucagon)**	**1. Place white tube into one nostril** 	**2. Push the button on the bottom until the green line disappears** 	**3. After hearing 2 clicks, remove the tube from the nose**
 **Gvoke HypoPen**	**1. Remove red cap on the end**  	**2. Place yellow end on the skin (outer upper arm, lower abdomen, or outer thigh on bare skin) and hold for 5 seconds** 	**3. Window will turn red when injection is complete**
